Remote/Community Isolations:

- None reported

WEATHER OF CONCERN

Weather of Concern

- Stormy weather will impact portions of Northern California and Southern California through Monday. Two primary waves are expected and will be water and wind related. Periods of heavy precipitation may lead to widespread urban and localized flooding making travel more dangerous.
- The Sacramento Weather area of responsibility, which includes burn scar areas in Lake, Yolo, Butte, El Dorado, Calaveras and Amador counties, advises that the upcoming weather event is not anticipated to produce precipitation rates, over the burn scar areas, which will exceed the debris flow criteria that has been established by the National Weather Service.
- Red Flag Warning in effect from noon today to 2100 hours this evening for areas in San Bernardino County

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

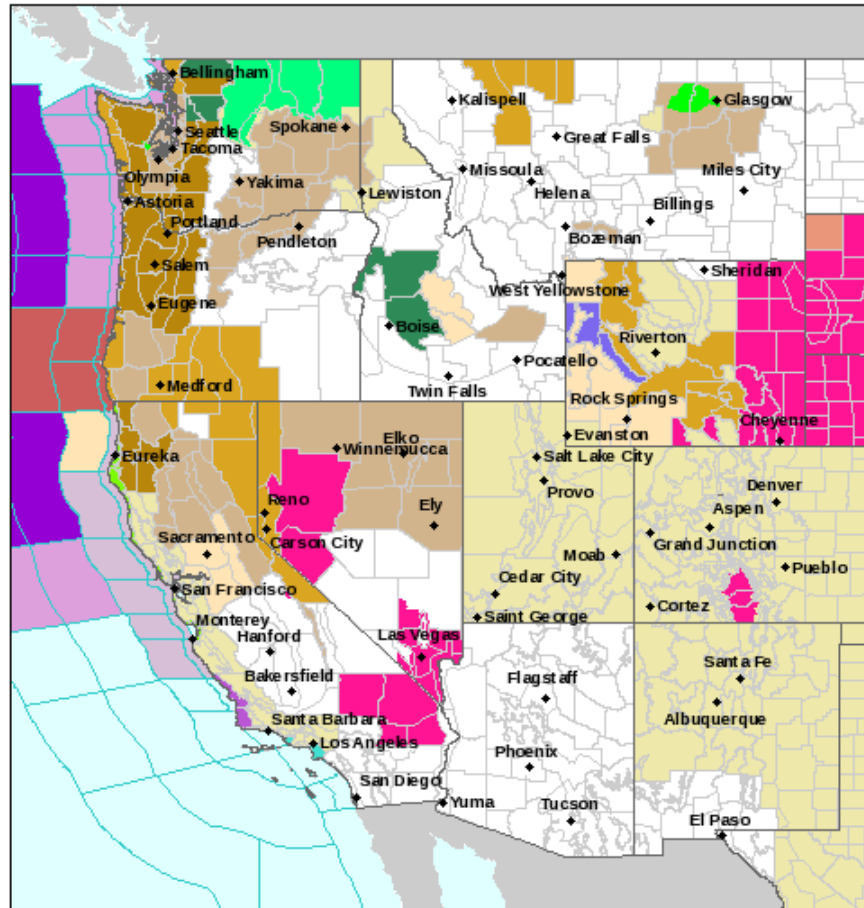

NORTHERN CALIFORNIA

Today precipitation will become more showery with a few (very wet) thunderstorms possible. What looks like an even stronger weather system is expected to roll across the region tomorrow with stronger southerly winds and heavy precipitation in more areas. Most locations will probably see wind speeds of 15-25 mph with gusts 35-55 mph develop Saturday with stronger values in the higher elevations. If soils become saturated, trees may become susceptible to being blown over. Showers and rain will linger Sunday and showers will be in the north Monday. Things begin to dry out Tuesday and high pressure will become rather strong the rest of next week with a marked warming and drying trend expected. Unseasonably cool temperatures will last into next week with our warmest areas dropping into the lower and mid 60s this weekend before that warming returns next week.

SOUTHERN CALIFORNIA

Three storm systems are expected to bring periods of heavy rain to Northern California today and into the weekend. The first storm, which is the strongest one, will reach the northern part of the state this morning and bands of rain will sink southward into the northern part of the Southern California this afternoon. Most of the precipitation will remain north of the area, but a half to three quarters of an inch of rainfall will be possible in Monterey County and in Yosemite National Park. A trace to a quarter of an inch may fall in San Luis Obispo County and the Sierras north of Fresno County. Drizzle or light showers may bring trace amounts further south. The snow level will remain above 7,000 feet. Strong west winds of 20-30 with gusts to 65 mph will be possible today in the Sierra high country eastward into Mono County and the Inyo National Forest. Wind gusts to 40 mph will also be possible from the Antelope Valley eastward into the Mojave Desert Friday. Precipitation will end tonight and partly to mostly sunny skies and seasonally cool weather can be expected tomorrow. The second system will bring half as much rainfall as the first system tomorrow night. Similar amounts can be expected from the final system Sunday night into Monday morning. It will remain quite windy in the Sierras and desert throughout the weekend. Monday and Tuesday, expect gusty north winds across Santa Barbara County and the I-5 Corridor as the trough heads into the Great Basin. Winds are expected to switch around to the northeast Tuesday night into Wednesday. Offshore winds may continue into the second half of next week, resulting in much warmer weather for Southern California. Highs will likely be in the 90s with minimum RH in the single digits and teens across much of Southern California during the second half of next week.
